Wherever possible Richard Burbidge products are manufactured from solid lengths of timber. However, in some circumstances in order to enhance a products strength and/or stability or to reduce the environmental impact of the raw material we use, it is necessary to use laminated and/or finger jointed material. Timber is a natural material and whilst great care is taken to match jointed pieces some colour variation is to be expected. If you wish to clarify the specification of any of our products please contact our Technical Department on 01691 678212.

Timber is a natural material and colours may vary between components.

Colours of components shown in this brochure are as accurate as the printing process will allow.

Please note that the product ranges shown in this brochure may not be available in all outlets.

Richard Burbidge Limited has a policy of continuous product development and improvement. Whilst information is correct at the time of going to press, we reserve the right to make changes without notice. E & OE.

FIXING systems

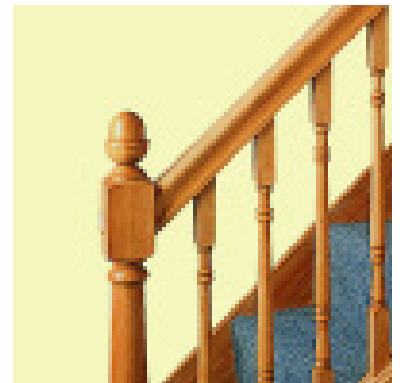

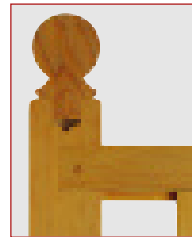

Whether you are trying to achieve a traditional or contemporary look, there is a fixing system to suit your skill level.

STRAIGHT HANDRAIL SYSTEM

A high quality balustrade, in almost any staircase configuration, can be achieved using the Straight handrail system. The system is extremely flexible, allowing you to use a combination of modular components in various designs and timbers. The modular approach to building up newels using a wide range of bases, turnings and cap designs means specific solutions can be achieved for your clients and customers, in both refurbishment and new build projects.

Available in the following ranges:

TRADITIONAL WHITE PRIMED CLASSIC OAK
WHITE OAK METAL BALUSTERS

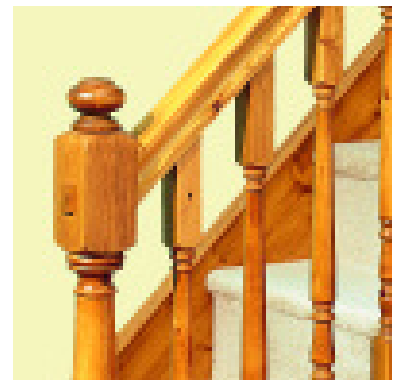

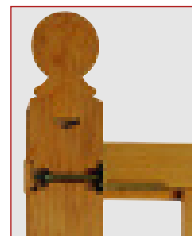

BRACKET FIX SYSTEM

When project economics or on site time are at a premium, the unique Bracket Fix system provides the perfect solution. The Bracket Fix system was developed to save valuable time but without sacrificing finished jointing quality or strength. An additional benefit is that the skill level is somewhat less involved than with other installations – helping further with project costs. The wide range of components allows you to tailor to your clients and customers needs.

Available in the following ranges:

TRADITIONAL SLENDER METAL BALUSTERS

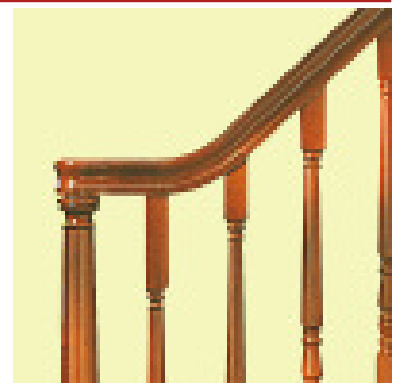

CONTINUOUS HANDRAIL SYSTEM

Richard Burbidge has developed a series of fittings with sophisticated jointing systems to help ease the professional's involvement, but the real skills are reflected by the flowing lines of the handrail as it rises and changes direction.

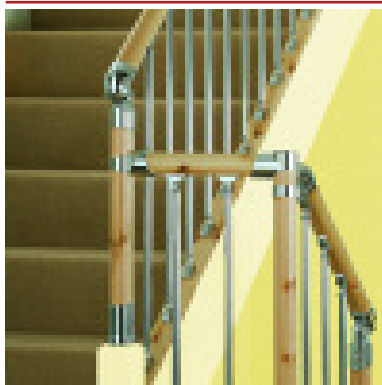

The secret is in the fittings, allowing the handrail to flow uninterrupted over the newels and spindles.

Available in the following ranges:

TRADITIONAL CLASSIC OAK

FUSION™

Fusion™ is a truly innovative, patented new balustrading system created and designed by the Richard Burbidge product development team.

Sleekly designed brackets or connectors fix the rails and newels together, and ingenious ABS plastic brackets fit the balusters to the minimalist, pre-finished 54mm round handrail and ungrooved baserails.

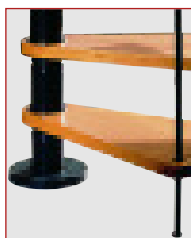

Available in the following finishes:
CHROME PLATED BRUSHED NICKEL

SPIRAL STAIRCASES

Richard Burbidge offers two models of spiral staircases to suit your individual taste. Styled in Italy by one of Europe's top spiral staircase manufacturers, the flights feature superb quality with a level of technical innovation that provides flexibility with easy installation.

A distinctive system with classic good looks

Richard Burbidge can offer you a wide range of stair balustrade options to achieve a traditional look within the home. There are two distinctly different looks that can be achieved using traditional turned stair balustrade – Post to Post and Continuous.

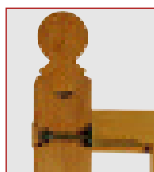

Post to Post

The Post to Post look is typical of a straight flight staircase using two newel posts – top and bottom, which is then customised using your choice of spindle, rail, newel cap and timber. The Post to Post look offers huge flexibility and most staircase configurations are achievable.

For use with:

Continuous Handrail

The smooth curvaceous lines of a volute or opening cap on a continuous handrail are the perfect addition to an imposing hallway, adding value and elegance to a prestigious new build or refurbishment project.

Richard Burbidge has developed a series of fittings with sophisticated jointing systems to help ease the professional's involvement, but the real skills are reflected by the flowing lines of the handrail as it rises and changes direction.

Available in a choice of hemlock, dark hardwood, (for details of oak and ash see pages 22-23) the continuous handrail system has a wide variety of fittings to cater for all situations, complemented with spindle designs in matching timbers complete this picture of elegance.

White Stairparts

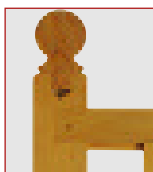

Recognising the importance of achieving a striking transformation in minimal time, Richard Burbidge has introduced a range of time-saving white pre-primed stairparts.

Pre-primed in a high quality eggshell finish, after a light sanding, these versatile stairparts can be easily finished using a solvent-based top coat to create a stunning end result.

Designed to be fitted using the straight handrail system, a professional finish can be achieved on almost any staircase configuration and for increased flexibility all components are compatible with other Richard Burbidge products, allowing you the freedom to mix and match to create the perfect look.

A complete range of complementary products is available including handrails, baserails, and newels and newel caps in both 82mm and 90mm section sizes and for added convenience, two one-piece newels have also been included to further reduce costs and fitting time.

STAIRFIT

...saves time and labour

timber PINE spindle COLONIAL newel COLONIAL cap BALL

Stairfit is a brand new range of balustrading kits available from Richard Burbidge. It offers time and labour saving benefits for the professional as well as the DIYer with its unique design and innovative installation solutions.

Stairfit is suitable for a typical 42°, 13 tread, straight flight staircase and features 2 distinctive components that make it virtually 'saw free'. As well as a pre-tenoned spindle, the kit includes a carrier rail positioned within the handrail which is supplied complete with mortises ready for the spindles to be glued in and screwed - greatly reducing the time and joinery work

required. Supplied in pine, the Stairfit system is available with either 32mm Edwardian or 41mm Colonial spindles, together with all the necessary components for a standard straight flight, including newels, newel bases, caps, handrails, baserails and carrier rails.

Optional 32mm and 41mm landing kits are also available, containing pre-prepared hand and baserails that are supplied mitred as well as return pieces with associated fixings for ease of assembly. The kits are suitable for a typical return landing and include newels, newel bases and newel caps also supplied as halves.

Full fixing instructions are available in all Stairfit packs and on our website.

FUSION™ range

timber BEECH connectors & balusters BRUSHED NICKEL

www.richardburbidge.co.uk

...a totally new concept

timber DARK HARDWOOD connectors & balusters BRUSHED NICKEL

timber PINE connectors & balusters CHROME PLATED

Innovative, flexible, simple, versatile

Fusion™ is a truly innovative new balustrading system created and designed by the Richard Burbidge product development team.

So what is Fusion™?

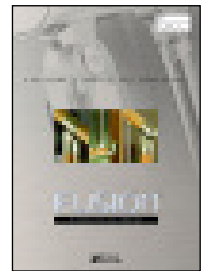

Gone is the traditional newel, now replaced by the same round handrail profile of the handrail. Sleekly designed connectors fix the rails and newels together, and ingenious brackets fit the balusters to the minimalist round handrail and baserail.

The baluster brackets flex to suit pitches between 38° to 45°. Once fixed in place, the ABS material they're produced in, means they will remain firmly at the correct angle.

The handrails, baserails and newels are prefinished in a clear varnish. The chrome plated and brushed nickel balusters and brackets are ready to use and unlike timber there is no need to individually sand down and varnish tens of spindles.

There are a variety of design options to suit different tastes. Four timbers: oak, dark hardwood, pine and beech. The metal balusters and handrail connecting brackets are available in contemporary chrome plate or brushed nickel.

Whether you have a modern loft style apartment or a traditional semi, Fusion™ will create a distinct and unique look that will breathe life and texture into the home.

Fusion™ Commercial

Fusion™ is now available for light commercial installations. Ask for brochure AY008.

FUSION™ range

CONNECTORS

NEWEL BASE CONNECTOR

Connects the newel base to a newel post.

BOTTOM CONNECTOR

Connects bottom post to the staircase handrail.

TOP CONNECTOR

Connects the staircase handrail to the top post.

INTERMEDIATE CONNECTOR

Connects a handrail to a mid post where the staircase turns mid flight.

END CAP

Covers the top of the newel post.

WALL mounted handrails

Complement your balustrading styles and timbers

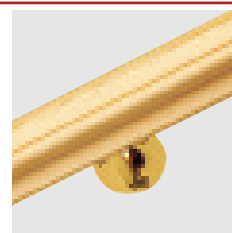

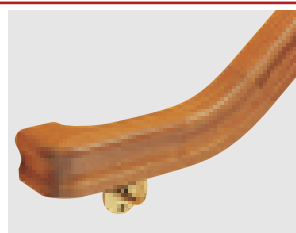

Demand for wall mounted handrails has been growing steadily, year on year. In response to requests from our trade partners in joinery manufacturing, building and specifying, Richard Burbidge has responded with two classic systems, which are ideal for commercial and institutional installations, on larger domestic staircases or for clients and customers of advancing years where the help of two handrails can make the climbing of stairs a little safer.

Our traditional handrail profiles (HDR and LHR) can be used as wall mounted handrails, complementing the balustrading styles and timbers.

Our round handrail system is just that – a round handrail, 54mm in diameter, available with two styles of matching timber end caps or a choice of three metal end caps making an elegant and practical addition to your balustrade installations.

TRADITIONAL HANDRAIL SYSTEM

The traditional handrail system is supported on strong wall brackets and offers two handrail profiles, HDR and LHR, and can be incorporated to complement selected balustrading.

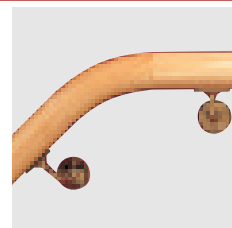

ROUND HANDRAIL SYSTEM

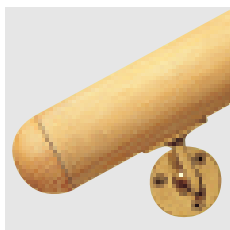

A highly effective system suitable for installation in addition to conventional balustrading, and the perfect handrail solution where stairs are located between walls.

SPIRAL staircases

Simple to install Spiral Staircase systems in kit form for a unique look

Normally spiral stairs are made to order, however thanks to our innovative Stair Select system, your flight can be delivered within days from stock with none of the usual frustrations of a lengthy wait. All Richard Burbidge spiral stairs are independently tested to ensure they fully comply to current UK Building Regulations, an important point to consider when selecting any staircase.

B R I O

The Brio spiral staircase from Richard Burbidge offers distinctive looks with competitive pricing. Featuring sturdy steel treads this flight offers the style of an Italian designed spiral staircase with market leading technical innovation designed to make installation simple.

R E C A N T O

The Recanto offers all of the superb features of the Brio model but introduces timber treads to give this model warmth and simple elegance.

As an option the Recanto can be assembled with a timber centre pole.

For full details and a specification sheet, please contact our customer services department.

DESIGNERcollection

timber OAK spindle ARLINGTON handrail STANDARD cap BALL

www.richardburbidge.co.uk

...the finest works of art in wood

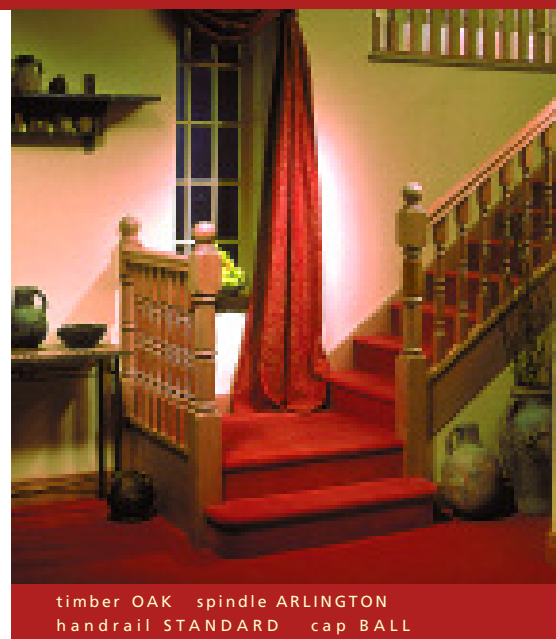

A collection of beautifully designed and crafted stair balustrade

The Richard Burbidge Designer Collection is an exceptional range of stair balustrade, which will add style and grace to your stairs. The wide range of styles allow you to create a stunning staircase whether you are refurbishing an existing stairway or designing a new one.

This authentic range, superbly finished and meticulously produced, reflects Richard Burbidge's rich wood turning history and will help you recreate the genuine period look of a traditional staircase.

Choose from 3 attractive designs of spindle - the Arlington, Hampton and Warwick and complementary newel posts to create a stunning look to your hallway.

The Designer Collection is available through selected Richard Burbidge stockists. These carefully created works of art should be installed and finished by a professional joiner or very accomplished DIY enthusiast.

Kick-board
sleeve

A typical installation whilst internal works continue

www.richardburbidge.co.uk

...providing an interim barrier

Rail to newel installation couldn't be simpler, with no tools required

Newel bases are simply screwed into the platform* before slotting over kick board sleeves & installing newels

Innovative, safe, simple to fit and remove

The Safety Handrail System provides an interim safety barrier on timber staircases prior to the installation of the final balustrade, which is often only installed once the build is complete to prevent damage.

The Safety Handrail System can be used whilst work continues to help meet the stringent health and safety regulations now imposed

on construction sites, including the 2005 Work at Height Regulations, which state that protection barriers must be fitted for works carried out at a height of 2 metres or above.

Easy to fit and remove, the Safety Handrail System consists of a metal newel post and base, kick board sleeve and adjustable metal handrails, available in a choice of lengths.

For a full product listing see page 65 in the components section.

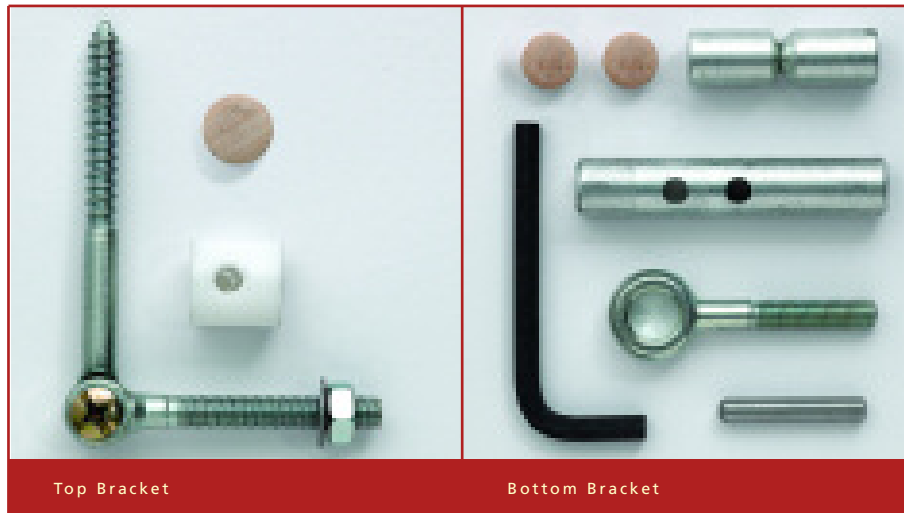

DEMOUNTABLE_{system}

timber PINE spindle PROVINCIAL handrail HDR cap BALL

www.richardburbidge.co.uk

...removable balustrade

Remove and re-fit as and when required, a clever solution for tight spaces

The Demountable System can be quickly and easily installed, saving time on-site.

Consisting of a range of detachable pine newels and associated fixings, the Demountable System helps to improve access through staircase areas and instructions can be supplied to the homeowner to allow them to remove and re-fit the balustrade as and when required –

when moving in furniture or large household items for example.

8 kits are available, consisting of a pre-drilled newel, a newel cap and a top bracket for fixing the handrail into the head of the newel and a bottom bracket for fixing the newel into the base. Among these are two half options for use on landings, making this product suitable for most new installations.

For a full product listing see page 65 in the components section.
